

RUST-ANODE®

RUST-ANODE®

AREAS OF APPLICATION:

- Towers
- Structures
- Sub Stations...

The **RUST-ANODE** is a **unique and exceptional** galvanizing compound with hot dip galvanized properties with **unrivalled characteristics** :

	SN31.101 approved (maintenance of distribution stations) and TET-LIA-N-SUP0012 (maintenance of pylons)		Light color changes in time
	Fast drying time (+/- 1hr)		Can be applied in ambient temperatures between -5 C (+23°F) to +37 C (+98°F)
	Dry to climb back on the same day		It allows the product to withstand to rain, 90 min. after application
	Indefinite over coating intervals with itself		Designed to allow expansion, contraction and bending of the substrate after application
	Excellent salt resistance		Minimal surface preparation
	Single pack formulation easy to mix		PH resistance between 5.5 and 9
	Extended zinc suspension after mixing		It allows the product to be used without paints top coat
	It allows the same corrosion protection as hot-dipped galvanizing and metalizing with equal dry film thickness's		Can be easily applied by mitt, brush, roller or spray application
