

RUST-ANODE PRIMER®

AREAS OF APPLICATION:

- Maritime
- Transportation
- Bridges
- Structures
- ...

The **RUST-ANODE PRIMER®** is a **unique and exceptional galvanizing compound** with hot dip galvanized properties with **unrivalled characteristics** :

	An outstanding elasticity and plasticity of the dry film that allow the expansion and bending of the metal substrate;		Little change of colour in the time;
	A total and permanent metalizing bonding to the metal substrate;		Application from -5 C (+23°F) to + 37 C (+98°F)
	A good resistance to impact;		Resist to mist and to rain, 90 min. after application;
	A resistance to abrasion of high performance;		Application without taking account of dew point;
	A superior resistance to hydrocarbons and salt damages;		Minimal surface preparation;
	Single pack formulation, easy to mix;		Resistance where pH is between 5.5 and 12.5;
	It allows the same corrosion protection as hot-dipped galvanizing and metalizing with equal dry film thickness's		Product to be used without top coat;
	It adheres to all types of metal, galvanized steel, new steel, stainless, aluminium and cast steel with spoiling the cathodic protection;		Easy application with any standard painting equipment spray gun or electrostatic.
